

# SAS Studio for beginners

Pr. Mokhtar KOUKI

Université de Carthage (ESSAI)

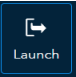

*[mokhtar.kouki@essai.ucar.tn](mailto:mokhtar.kouki@essai.ucar.tn)*

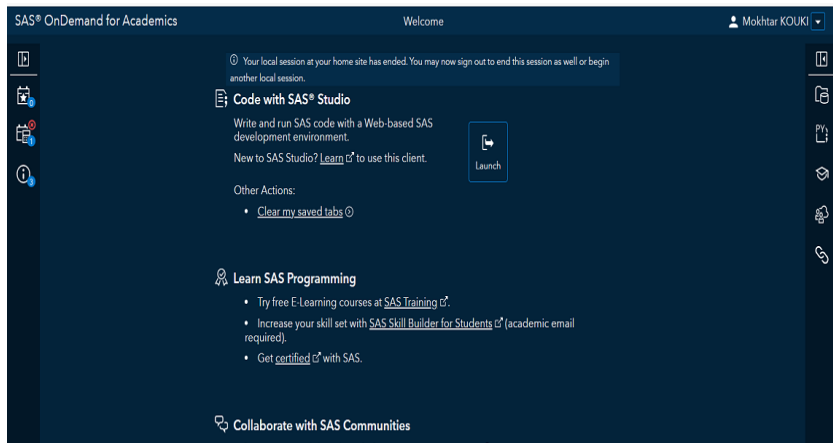

January 2023

# Contents

- 1 Get started : create a sas studio account
- 2 Create a library and import data
- 3 Assign labels and Formats
- 4 Proc Freq Procedure
- 5 Proc Means vs Proc Tabulate
- 6 Proc Boxplot
- 7 Proc sgplot and Proc sgscatter
- 8 Proc CORR
- 9 Proc Princomp
- 10 Proc SQL
  - Create a table from sql query
  - Joinning two data frame

- In your Browser write the following **SAS on Demand for academics**  
<https://welcome.oda.sas.com/>
- Log on or create an account
- When you log on, click on  button

SAS® OnDemand for Academics

Welcome

Mokhtar KOUKI

ⓘ Your local session at your home site has ended. You may now sign out to end this session as well or begin another local session.

 **Code with SAS® Studio**

Write and run SAS code with a Web-based SAS development environment.

New to SAS Studio? [Learn](#) to use this client.

 Launch

Other Actions:

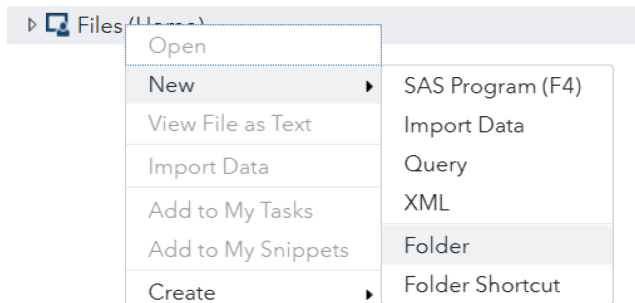

- [Clear my saved tabs](#)

 **Learn SAS Programming**

- Try free E-Learning courses at [SAS Training](#)
- Increase your skill set with [SAS Skill Builder for Students](#) (academic email required).
- Get [certified](#) with SAS.

 **Collaborate with SAS Communities**

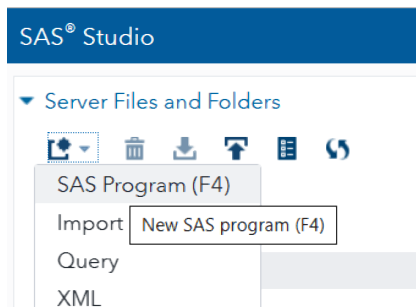

- **Create a new folder named tpsas** : right-Click on **files** ->select ->**New** -> select **folder**

And **Upload** the Excel file CSSpending2005.xlsx by click on the Upload button and brows your file as follows :

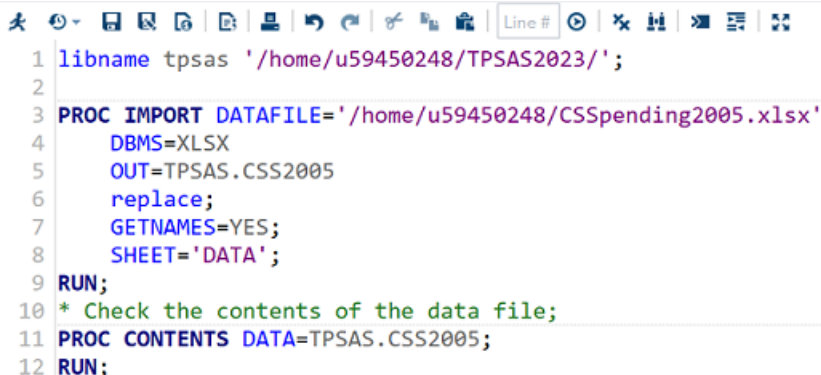

- **Create a new program file** : Clic on **Server Files and Folders**→select →**SAS Program F4)**

- **Create a library named tpsas to keep your files in** : type the following source code :

```
libname tpsas '/home/u59450248/tpsas/';
```

Type the following to import the excel file into sas studio and check for table contents:

```

1 libname tpsas '/home/u59450248/TPSAS2023/';
2
3 PROC IMPORT DATAFILE='/home/u59450248/CSSpending2005.xlsx'
4   DBMS=XLSX
5   OUT=TPSAS.CSS2005
6   replace;
7   GETNAMES=YES;
8   SHEET='DATA';
9 RUN;
10 * Check the contents of the data file;
11 PROC CONTENTS DATA=TPSAS.CSS2005;
12 RUN;
```

## contents of the original table

Alphabetic List of Variables and Attributes					
#	Variable	Type	Len	Format	Label
2	V8	Num	8	BEST.	V8
3	V11	Num	8	BEST.	V11
4	V245	Num	8	BEST.	V245
5	V611	Num	8	BEST.	V611
6	V612	Num	8	BEST.	V612
7	V613	Num	8	BEST.	V613
8	V614	Num	8	BEST.	V614
9	V615	Num	8	BEST.	V615
10	V616	Num	8	BEST.	V616
11	V617	Num	8	BEST.	V617
12	V618	Num	8	BEST.	V618
14	V700	Num	8	BEST.	V700
13	V805	Num	8	BEST.	V805
1	V980	Num	8	BEST.	V980

## - Create a temporary copy and assign labels of variables

```
data css2005;  
  set tpsas.css2005;  
  label V980='Household identifier'  
        V8='Geographic zone'  
        V11='Household size'  
        V245='Socio-professional category of the main household maintainer'  
        V611='Food expenditure'  
        V612='Housing expenditure'  
        V613='Clothing expenditure'  
        V614='Hygiene and care expenditure'  
        V615='Transportation expenditure'  
        V616='Telecommunications expenditure'  
        V617='Teaching expenditure'  
        V618='Leisure expenditure'  
        V805='Total expenditure'  
        V700='household weight';  
run;
```

## contents of data table after assigning labels of variable

Alphabetic List of Variables and Attributes					
#	Variable	Type	Len	Format	Label
2	V8	Num	8	BEST.	Geographic zone
3	V11	Num	8	BEST.	Household size
4	V245	Num	8	BEST.	Socio-professional category of the main household maintainer
5	V611	Num	8	BEST.	Food expenditure
6	V612	Num	8	BEST.	Housing expenditure
7	V613	Num	8	BEST.	Clothing expenditure
8	V614	Num	8	BEST.	Hygiene and care expenditure
9	V615	Num	8	BEST.	Transportation expenditure
10	V616	Num	8	BEST.	Telecommunications expenditure
11	V617	Num	8	BEST.	Teaching expenditure
12	V618	Num	8	BEST.	Leisure expenditure
14	V700	Num	8	BEST.	household weight
13	V805	Num	8	BEST.	Total expenditure
1	V980	Num	8	BEST.	Household identifier

## Prepare and assign format to categorical variable V8 and V245 (labels of levels)

```
proc format;
  value zone 1="Urban" 2="Rural";
  value csp
    1='Senior liberal profession'
    2='Medium liberal profession'
    3='Other employee'
    4='CEO, industry and commerce'
    5='Independent industry and trade'
    6='Non-agricultural workers'
    7='Farmer'
    8='Farm workers'
    9='Unemployed'
    10='Retreat'
    11='Other inactive'
    12='Non-household support';
run;
```

```
data css2005;
  set css2005;
  format V8 zone. V245 csp.;
run;
```

Use **Proc Freq** to obtain the frequency table of the Geographic Zone and the SPC variables and use V700 as **weight**

```
Proc freq data=css2005;  
    table v8;  
    weight V700;  
run;
```

```
Proc freq data=css2005;  
    table v245;  
    weight V700;  
run;
```

Geographic zone				
V8	Frequency	Percent	Cumulative Frequency	Cumulative Percent
Urban	1517349	68.22	1517349	68.22
Rural	706800	31.78	2224149	100.00

Socio-professional category of the main household maintainer					
V245	Frequency	Percent	Cumulative Frequency	Cumulative Percent	
Senior liberal profession	134491	6.05	134491	6.05	
Midum liberal profession	97224	4.37	231715	10.42	
Other employee	191682	8.62	423397	19.04	
CEO, industry and commerce	158875	7.14	582272	26.18	
Independent industry and trade	76032	3.42	658304	29.60	
Non-agricultural workers	581598	26.15	1239902	55.75	
Farmer	206426	9.28	1446328	65.03	
Farm workers	49922	2.24	1496250	67.27	
Unemployed	42595	1.92	1538845	69.19	
Retreat	308322	13.86	1847167	83.05	
Other inactive	252983	11.37	2100150	94.42	
Non-household support	123999	5.58	2224149	100.00	

Create a Pivot-Table between SPC and Geographic Zone and test for the independence between the two variables

```
Proc freq data=css2005;  
table v245*v8/nocol norow nopercent chisq;  
weight v700;  
run;
```

Table of V245 by V8			
V245(Socio-professional category of the main household maintainer)	V8(Geographic zone)		
	Urban	Rural	Total
Senior liberal profession	121740	12751	134491
Midum liberal profession	81082	16142	97224
Other employee	163164	28518	191682
CEO, industry and commerce	132914	25961	158875
Independent industry and trade	56383	19649	76032
Non-agricultural workers	378214	203384	581598
Farmer	41115	165311	206426
Farm workers	12975	36947	49922
Unemployed	22149	20446	42595
Retreat	267542	40780	308322
Other inactive	185186	67797	252983
Non-household support	54885	69114	123999
Total	1517349	706800	2224149

Statistics for Table of V245 by V8

Statistic	DF	Value	Prob
Chi-Square	11	440935	<.0001
Likelihood Ratio Chi-Square	11	439211	<.0001
Mantel-Haenszel Chi-Square	1	34035	<.0001
Phi Coefficient		0.44525	
Contingency Coefficient		0.40675	
Cramer's V		0.44525	

Use **Proc Means** to obtain descriptive statistics of the variables V611-V613 by Geographic Zone and use V700 as **weight**

```
proc means data=css2005  q1 mean median q3 std stderr sum maxdec=2;  
class v8;  
var v611-V613;  
weight V700;  
run;
```

Use **Proc Means** to obtain descriptive statistics of the variables V611-V613 by Geographic Zone and use V700 as **weight**

```
proc means data=css2005 q1 mean median q3 std stderr sum maxdec=2;
class v8;
var v611-V613;
weight V700;
run;
```

The MEANS Procedure

Geographic zone	N Obs	Variable	Label	Lower Quartile	Mean	Median	Upper Quartile	Std Dev	Std Error	Sum
Urban	7632	V611	Food expenditure	453.32	792.48	650.58	956.37	8688.42	7.05	1202461315.8
		V612	Housing expenditure	221.94	614.27	347.82	622.57	20364.04	16.53	932064745.91
		V613	Clothing expenditure	31.88	197.16	94.20	239.50	5140.68	4.17	299158185.38
Rural	4685	V611	Food expenditure	311.54	556.70	459.25	685.07	6534.00	7.77	393472172.58
		V612	Housing expenditure	89.66	241.29	141.05	248.28	4456.38	5.30	170543480.05
		V613	Clothing expenditure	16.00	100.28	48.50	119.00	2305.60	2.74	70878352.00

Use **Proc Tabulate** to obtain descriptive statistics of total expenditure by SPC and use V700 as **weight**

```
proc tabulate data=cass2005;
class v245;
weight v700;
keylabel pctn='%' pctsum='% of sum';
var V805;
table V245 All='Total',(V805='')*(N pctn Mean median std sum pctsum)/box='';
run;
```

Use **Proc Tabulate** to obtain descriptive statistics of total expenditure by SPC and use V700 as **weight**

```
proc tabulate data=css2005;
class v245;
weight v700;
keylabel pctn='% ' pctsum='% of sum';
var V805;
table V245 All='Total',(V805='')*(N pctn Mean median std sum pctsum)/box='';
run;
```

	Total expenditure						
	N	%	Mean	Median	Std	Sum	% of Total

## Use **Proc Tabulate** to obtain the average total expenditure by Geographic Zone and SPC

```
title 'Descriptive Statistics of Total expenditure by Geographic Zone and SPC';
proc tabulate data=css2005;
  class v8 v245;
  weight v700;
  keylabel pctn='%';
  var V805;
  table (v245=''*V805='') V805='All', V8='''*(N pctn Mean median std) (N pctn
    Mean median std)/box='Socio-Professional Category';
run;
```

# Use Proc Tabulate to obtain the average total expenditure by Geographic Zone and SPC

```

title 'Descriptive Statistics of Total expenditure by Geographic Zone and SPC';
proc tabulate data=cass2005;
  class v8 v245;
  weight v700;
  keylabel pctn='%';
  var V805;
  table (v245=''*V805='') V805='All', V8='''*(N pctn Mean median std) (N pctn
    Mean median std)/box='Socio-Professional Category';
run;

```

Descriptive Statistics of Total expenditure by Geographic Zone and SPC

Socio-Professional Category	Urban					Rural					N	%	Mean	Median	Std
	N	%	Mean	Median	Std	N	%	Mean	Median	Std

All	7632	61.96	2432.00	1755.00	35769.37	4685	38.04	1276.68	1000.00	13858.55	12317	100.00	2064.86	1483.00	30299.31

Use the **Proc Boxplot** to compare the distribution of the haousehold size between geographic zone

```
title "Distribution of Household size by geographic zone";  
proc boxplot data=Css2005;  
    plot v11*v8;  
run;
```

Use the **Proc Boxplot** to compare the distribution of the household size between geographic zone

```
title "Distribution of Household size by geographic zone";
proc boxplot data=Css2005;
  plot v11*v8;
run;
```

Use the **Proc Boxplot** to compare the distribution of the haousehold size between geographic zone and insert overall and individual statistics

```
proc boxplot data=Css2005;  
  plot v11*v8;  
  inset min mean max stddev /  
    header = 'Overall Statistics'  
    pos     = tm;  
  insetgroup q1 q2 mean q3 stddev /  
    header="Statistics By group statistics";  
run;
```

Use the **Proc Boxplot** to compare the distribution of the household size between geographic zone and insert overall and individual statistics

```
proc boxplot data=Css2005;
  plot v11*v8;
  inset min mean max stddev /
    header = 'Overall Statistics'
    pos    = tm;
  insetgroup q1 q2 mean q3 stddev /
    header="Statistics By group statistics";
run;
```

Use the **Proc sgplot** to plot a scatter plot of the leisure expenses and food expenses for the three first SPC and food expenses less 5000 and leisure expenses less than 2000 TND

Use the statement **Where** to filter data

```
title "Scatter plot of the leisure and food expenses";
```

```
proc sgplot data=css2005;  
  scatter x=V611 y=V618/group=V245;  
  where v245 le 3 and v611 le 5000 and v618 le 2000;  
run;
```

Use the **Proc sgplot** to plot a scatter plot of the leisure expenses and food expenses for the three first SPC and food expenses less 5000 and leisure expenses less than 2000 TND

Use the statement **Where** to filter data

```
title "Scatter plot of the leisure and food expenses";
```

```
proc sgplot data=css2005;
```

```
  scatter x=v611 y=v618/group=v245;
```

```
  where v245 le 3 and v611 le 5000 and v618 le 2000;
```

```
run;
```

Use **Proc CORR** to evaluate pairwise correlation and scatter plot on SDGs database.

```
proc corr data=sdgs2021 plots=scatter;  
  var sdg1_wpc sdg2_undernsh sdg2_stunting sdg2_wasting  
      sdg2_obesity sdg3_incomeg sdg3_smoke sdg4_earlyedu  
      sdg4_literacy sdg8_unemp;  
run;
```

Use **Proc CORR** to evaluate pairwise correlation and scatter plot on SDGs database.

```
proc corr data=sdgs2021 plots=scatter;
  var sdg1_wpc sdg2_undernsh sdg2_stunting sdg2_wasting
      sdg2_obesity sdg3_incomeg sdg3_smoke sdg4_earlyedu
      sdg4_literacy sdg8_unemp;
run;
```
